

Oyumaru Moulding

Oyumaru is an amazing moulding material from Japan which allows you to make a mould of a small object, easily. Each pottle contains 7 sticks. Simply heat the stick by placing in hot water or heating with a hairdryer until the stick is soft. Roll in to a ball and then place the object you wish to make a mould of into the soft Oyumaru. Leave to set for 5-10 minutes. Gently remove your object and you have your mould! You can now press Art Clay Silver in to the mould (remember to lightly oil the mould first) and create an exact replica of your piece in fine silver!

The Oyumaru sticks can be used again by reheating and can be combined together to make a larger mould by heating and rolling together.
